PRODUCT OVERVIEW

TELOGIS FLEET

Telogis Fleet is a GPS-based fleet productivity and management platform. It is a scalable, easy-to-use, Software as a Service (“SaaS”) solution for enterprise fleets. Its ease of use has allowed Telogis Fleet to achieve a significantly high adoption rate among its fleet management customers. Telogis Fleet enables customers to improve productivity and reduce operating costs by providing secure, remote access to real-time GPS vehicle and driver information.

Features of Telogis Fleet include:

- Engine diagnostics
- Vehicle maintenance
- Dispatch, routing and route optimization
- Real-time traffic
- Turn by turn directions
- Real-time alerts

TELOGIS GEOBASE

Telogis GeoBase is a market-leading geospatial platform and mapping solution for application developers, systems integrators, enterprise users and other peers, including telematics OEMs.

Features of Telogis GeoBase include:

- Rich and Detailed Maps
- Navigation
- Geocoding
- Reverse Geocoding and Rule Processing
- Dispatch, Routing and Route Optimization

TELOGIS MOBILE

Powered by Telogis Fleet, Telogis Mobile is a wireless, location-enabled application that allows businesses of all size to increase regulatory compliance, streamline operations, and improve customer service while eliminating paperwork and manual dispatch functions. Telogis Mobile can be run on any Windows CE device.

Features of Telogis Mobile include:

- Voice prompted turn-by-turn navigation using premium NAVTEQ map data
- Hours of service (HOS) module for DOT regulatory compliance
- Real-time instant messaging

TELOGIS ROUTE

Telogis Route is a GPS fleet management and multiple vehicle route optimization and planning solution. Customers benefit by reduced transportation costs, improved customer service, and improved operational efficiencies.

Features of Telogis Route include:

- Multi-vehicle route optimization taking into account delivery schedules and balancing metrics
- Multi-day planning with frequency scheduling and customer time windows
- System generated route cards with driving directions

TELOGIS LIVE

Telogis Live is a connected access portal which allows organizations to view vehicles from a number of operators' fleets on a single screen. This portal is particularly useful for situations such as disaster response, so that utilities can clearly see the locations of multiple vendors' vehicles, to accurately track and manage resources from a single interface.

Features of Telogis Live include:

- Allows organizations to view vehicles from a number of operators' fleets on a single screen
- Instantly turn on and off access
- Provide access based on custom hierarchy levels
